

CITY OF SUTHERLIN

PUBLIC WORKS DEPARTMENT

Backflow Testing

If you currently have a backflow device installed in your water system it is your responsibility to have this device tested annually by a State of Oregon certified backflow tester before September 15th of each year. If you have a residential lawn sprinkler system, a fire suppression system, or are an industrial, commercial water customer, you are required to have a backflow device installed in your water system. These devices are installed in your system to prevent your water from re-entering the City's water mains and causing contamination.

The State of Oregon Human Resources (Health Dept.) and the City of Sutherlin both require an annual backflow test on all devices installed in the City's water system.

The following is a list of backflow testers.

| | |
|----------------------------------|----------------------------|
