

Company Inspections

As part of its dedication to the prevention of fire and injuries, the Sutherlin Fire Department works with the community through an inspection program.

Each year Sutherlin Firefighters inspect commercial and multi-family occupancies for fire and life safety hazards. Hazards found by fire personnel are noted and reviewed with the occupant or building management.

When an occupancy is found to have hazard(s), the Fire Department reviews these with the occupant and firefighters will then return approximately 14-30 days later to ensure correction of the hazard(s) originally noted.

Firefighters review any outstanding hazard(s) with the occupant. If corrections are not made with the first visit by the firefighters, the Firefighters will return approximately two weeks later to ensure that those items not corrected during the previous visit, are completed.

When corrections have not been completed as prescribed, the City of Sutherlin may enforce these by way of a citation.

For further information about the inspection program and process, contact Sutherlin Fire Station 1 @ 541-459-1394.

Company Inspections

An inspection includes the following review:

- Update and review of vital Contact information.
- Review of compliance with Fire Code (Oregon State Fire Code).
- Review of site hazards, access and evacuation routes.
- Review of compliance of City of Sutherlin Fire Code Ordinance
- Review of building layout by fire personnel for pre-incident information and training.
- Review of building fire protections systems for pre-incident information and training.
